INTERNET CHAT EMAIL (ICE) BOX

The TLC Solutions' ICEBox is a fully functional internet Server, Chat Server, and Email Server designed for offline internet simulation. Fully customizable and hosted on a single server platform, the ICEBox can be the cloud when the real cloud isn't available. The ICEBox is also an effective solution when it is necessary to segregate your network from the real world internet, creating a secure closed loop environment. Web sites can be updated periodically to keep relevant data up to date, making the information realistic and dynamic. With the ICEBox you are the WEB Master.
